# Our Vision

Our goal is to offer a unique redemption feature that will provide enhanced security and value to our token holders.

The essence of our vision is to create a redeemable Cannabis Token, ensuring its value remains intact for our esteemed token holders and investors. Regardless of the token's value equivalent in Fiat currency, we want to assure our stakeholders that they will have the option to redeem the token for a product offered by our company.

By implementing this redemption mechanism, we aim to safeguard the Indica token from devaluation, ultimately protecting the interests of our valued token holders and investors.

Furthermore, we aim to setup more indoor grow farms through the acquisition of retail investment into Indica ensuring supply meets demand.

# Introduction

Indica COIN is a unique cryptocurrency that aims to cater to the increasing demand for cannabis products. Our tokens, known as Indica product tokens, hold value as they are directly backed by physical AAA indoor quality cannabis. Even if the token's value is zero on an exchange, holders can redeem their tokens for premium cannabis products through our website.

By investing in Indica tokens, you not only join the cryptocurrency market but also contribute to the growth and development of the cannabis industry. Our ICO will enable the establishment of additional indoor cannabis farms, primarily in South Africa and other African regions. These farms will cater to the global market, which is estimated to be worth billions of dollars, servicing both medical and recreational cannabis usage.

Our supply chain consists of decentralized growers and an in-house team that ensures the cultivation, harvest, and distribution of high-quality cannabis products.

# What is Indica COIN

Indica Coin operates off the Solana blockchain. Solana is an innovative platform that stands out for its robust functionality and value-add for crypto enthusiasts. Built with the latest technological advancements, Solana offers a high-performance blockchain ecosystem that facilitates seamless and lightning-fast transactions for cryptocurrencies like the newly created Indica coin. Solana's key features include a unique Proof of History (PoH) consensus mechanism, which ensures accurate transaction ordering and enhances network scalability. The blockchain's low transaction fees and high throughput capabilities make it an ideal choice for developers and users alike. With Solana, you can enjoy reliable and efficient operations, enabling your Indica coin to thrive in the dynamic world of cryptocurrencies.

We have created a total of 46 million Indica tokens with a focus on privacy, security and discretion. The reason for minting only 46 million is to maintain viability, sustainability and transparency in a volatile crypto market.

# Join A Decentralized Cannabis Growing Network

Currently we have a growers' network of 46 decentralized indoor grow out farms established across the Johannesburg region to help us cultivate. After each successful harvest quarterly, we will offer commissions for heads cultivated.

Our aim is to also to create a place where professional growers can create better seed genetics.

This will create a real bud token project where you know exactly what the THC & CBD levels of the plants are. Full trackability from generation to delivery embedded.

Our grow operations will be overseen by a dedicated team of experienced growers and supported by advanced artificial intelligence monitoring systems. These measures are in place to ensure that all system parameters always remain consistent and operational.

- After our pre-ICO sale
- Cultivation operations for our Cannabis Bud Vault will commence
- Product creation and opening of our decentralised growing network
- Branding and trademarking
- Hiring an advisory team; beginning the employment processes through bounties on our website
- Provisions for a meet and greet space at our headquarters will be available. Furthermore; in-house packaging workspace, media and interview studio, bud management workspace, laboratory with a bud vault, a coffee relaxation area (Indica room) and online marketing, social media and crypto management workspace.
- On completion of our ICO we will have enough funding to launch into the global multibillion dollar cannabis growing/harvesting/distribution economy.
- **First cannabis bud backed crypto token.**

**Please note:** Our headquarters will be provisioned with emergency backup power, security systems and in-house servers

# Seed

Indica only makes use of Feminized seeds. Feminized seeds only produce the flowering part of the cannabis plant i.e. the female part. The flowering part of the plant is what is colloquially known as the bud.

The quantity of seeds yielded by cannabis plants vary largely based on the type of cannabis plant used. For example; auto flowering plants are smaller in size and mature much faster compared to a regular cannabis plant. As a result, the seed yield from plant to plant can vary from several hundred to several thousand seeds. This contributes one of several factors towards the price. Aside from the type of seed, seeds differ genetically. This means that breeders have grown them into distinct strains that can produce a wide variety of effects. This is where the real value in cannabis seeds lies.

# Bud Prices

Bud price examples taken from six reputable genetics - Certain genotypes vary in price due to the THC and CBD contents with prices ranging from \$4 up to \$25 per Bud. As we decide on which strains, we will cultivate, in turn giving the token the ability to become more valuable

Only genetically stable cuttings will be selected to cultivate with growth cycles of three months.

Total bud quantity production will be determined by the demand for token redemption and the current quantity of buds currently in the vault.

Initial bud creation will start at 100,000 buds and scale to 20 million buds per cycle.

# Redemption Process

Choose buds from the vault, place an order and pay with tokens on our website or mobile app.

Our team will process your order once we have received your token

Buds delivered

# Withdrawal process

## Online redemptions

You will be brought to a section of the website where you will choose which buds you would like to withdraw from the vault. Upon choosing the strains you will be given an order reference number. Upon receiving the Indica tokens into our wallet, your order will be processed and shipped. Shipping charges will apply at the same rate as charged to our customers on our web retail site. Orders online can also be click and collect.

## In person redemptions

In person redemptions will require real time exchange of tokens and buds. One of our team will assist you with your order when you arrive at our dispensary. There will be several verified partner outlets globally that will have the facility to redeem Indica tokens. You will also be able to redeem Indica tokens at official events that our company would be attending. Large withdrawals may require you to contact our team before the event so that we can facilitate.

# Withdrawal process

## **Withdrawal and Vault**

Indica vault will have 24 million buds for withdrawal within five years post ICO. The selected strains will be produced by our team of decentralised growers and checked by our in-house quality control team. On completion, the buds will be analysed for viability and placed into humidity, temperature controlled and fireproof vaults. This seed vault is a cumulative bud vault, with the capacity to store up to 6 million buds. Indica vault will exclusively be used for bud withdrawal and no other purpose. Bud strains and quantities will be tracked through our Indica bud website. When a redemption is made this information will be simultaneously adjusted on our website via API'S to reflect bud's levels in the vault. The online representation of the vault will display a timeline of redemptions and quantities withdrawn.

## **Redeemed tokens - What happens next –**

Once Indica tokens have been redeemed, they will enter our company wallet. Depending on current market demand and seed vault reserve levels, Indica tokens will be traded back into circulation. A percentage of redeemed Indica tokens will also be donated to the Indica foundation, ensuring that the foundation can provide support to the medicinal cannabis community. Announcements will be publicly made via our approved social media channels.

# Exchanges and payment gateways

Like the crypto industry, the cannabis industry has experienced problems taking payments. But unlike the crypto industry, where banks have recently become more accepting, they have not with the cannabis industry. Indica token will launch on trading platforms and payment gateways. Indica will be launching on payment systems such as; 'CoinPayments.net, Coinbase, PayPal, BitPay etc.', after negotiations and ICO launch. Also trading on decentralized exchanges subject to platform negotiations.

Of course, Indica will have its own wallet available for downloaded on Apple and IOS.

# Indoor Locations

Our strategic plan for the development of our grow map primarily situated in Cape Town regions involves the acquisition of prime farmland property. We recognize Cape Town's humidity & stable weather patterns pertaining to less volatile fluctuations of temperature etc. and the potential for cultivating high-quality cannabis and meeting the increasing demand for our products. By purchasing land in this region, we aim to establish more indoor grow farms and ensure a consistent supply to meet the growing demand. Our team of experts will carefully select and develop the acquired properties, optimizing them for efficient and sustainable cannabis cultivation. Through this expansion, we aim to strengthen our position in the market while providing our valued customers with a reliable and top-notch cannabis experience.

# Foundation

The background of the slide features a soft-focus image of two hands. One hand holds a small glass dropper with a black cap, containing a yellow liquid. The other hand holds a green cannabis plant with serrated leaves. The overall tone is professional and natural.

- **Indica FOUNDATION**

- The idea of the foundation is that as community it can help start up projects and seed businesses.
- Advisers will be consulted and help us decide on the right foundation along with the board members.
- The foundation will be independent and nonprofit.

- **ROLE OF THE FOUNDATION**

- To help medical company startups acquire funding
- To find local projects that can make a difference
- The foundation will be created X, first focusing on the main ICO launch before we refine the foundation

# Grow Map

# Legal

A cannabis plant with several serrated leaves is positioned on the left side of the frame. A wooden gavel, with its head resting on the right and its handle extending towards the bottom left, is placed diagonally across the right side of the image. The background is a solid dark green color.

The sale and purchase of marijuana is still illegal in South Africa, and any resident or visitor found participating in these activities can face harsh penalties. It appears that those interested in making the most of the new law will have to plant their own seeds and wait for the plant to grow before smoking. But quite how much marijuana South Africans are allowed to grow and possess remains unclear, with these technicalities yet to be established or played out in a court of law.

Cannabis growth and distribution are regulated by different laws and policies in different countries and regions. In South Africa, cannabis was legalised for private recreational use in 2018, but the commercialisation of cannabis is still subject to various requirements and licences under the Medicines Act. The cannabis industry in South Africa has a potential value of R31 billion by 2023 and attracts investments from local and international companies. The industry faces challenges such as unclear regulations, lack of infrastructure, and social stigma. Cannabis is also a global market, with countries such as Germany, Canada, and the US having legalised or decriminalised cannabis for medical or recreational purposes. The global cannabis market is projected to grow by 14.06% from 2024 to 2028, reaching a value of US\$102.90 billion in 2028.

How much marijuana South Africans are allowed to grow and possess remains unclear

# Job Creation

At Indica coin, our mission goes beyond revolutionizing the cryptocurrency industry. We are committed to job creation and driving employment opportunities in the cannabis sector. Through the establishment of more indoor grow farms facilitated by retail investment into Indica, we aim to meet the growing demand for cannabis products. This expansion will not only contribute to the overall supply chain, but also generate a substantial number of new jobs in cultivation, manufacturing, distribution, and retail sectors. By harnessing the power of blockchain technology and embracing the potential of the cannabis industry, we are proud to pioneer innovative solutions that not only protect the interests of our token holders and investors but also contribute to the economic growth and prosperity of the communities we serve.

# Social Media

We are excited to announce that we will be launching a YouTube channel for Indica COIN, where you can follow our journey of growing, harvesting and redeeming the best cannabis in the world. Our channel will feature exclusive behind-the-scenes footage of our indoor grow farms, expert tips and tricks on how to cultivate your own cannabis plants, and interviews with some of the most influential people in the industry. You will also get to see how we process and package our products, and how you can use your Indica tokens to redeem them for yourself. Subscribe to our channel today and join us in creating a community of cannabis enthusiasts who share our passion for quality, security and value.

# Why invest in Weed..

Cannabis cultivation is integral to the cannabis and medical industry for several reasons. First, cannabis is the raw material for producing various cannabis products, such as oils, edibles, concentrates, and extracts. These products have different levels of potency, effects, and applications, catering to a diverse market of consumers. Second, cannabis is a source of revenue and taxation for the cannabis industry, which is one of the fastest-growing sectors in the world. According to a report by Grand View Research, the global legal marijuana market size was valued at USD 9.1 billion in 2020 and is expected to expand at a compound annual growth rate (CAGR) of 26.7% from 2021 to 2028. Third, cannabis is a potential treatment for various medical conditions, such as chronic pain, epilepsy, multiple sclerosis, glaucoma, and cancer. Cannabis contains cannabinoids, such as tetrahydrocannabinol (THC) and cannabidiol (CBD), that interact with the endocannabinoid system in the human body, which regulates various physiological processes. Cannabis can modulate pain perception, inflammation, mood, appetite, memory, and immune response. Cannabis can also reduce the side effects of chemotherapy, such as nausea and vomiting. In summary, cannabis is integral to the cannabis and medical industry because it is the basis for producing diverse cannabis products, it is a lucrative source of income and taxation, and it is a promising therapeutic agent for various diseases.

International drug laws do not strictly regulate cannabis because it has a variety of uses -- animal feed, oil production, clothing material - but some countries are stricter about their importation than others. Like the sale of growing equipment, cannabis buds and seeds are adjacent to the weed industry but not strictly a part of it. This makes controlling or even studying the market difficult.

# Bullish on Cannabis

The global cannabis market is expected to reach \$31 billion in 2022 and \$60 billion by 2026, according to a report by Grand View Research. The main drivers of this growth are the increasing legalization and decriminalization of cannabis in various countries, the rising demand for medical cannabis for the treatment of chronic pain, epilepsy, cancer, and other conditions, and the growing acceptance of cannabis as a lifestyle product.

The cannabis industry can be divided into two main segments: medical cannabis and recreational cannabis. Medical cannabis refers to the use of cannabis or its extracts for therapeutic purposes, under the supervision of a physician. Recreational cannabis refers to the use of cannabis for non-medical purposes, such as relaxation, socialization, or enjoyment.

Medical cannabis is currently legal in over 40 countries, including Canada, Germany, Australia, Israel, and South Africa. Recreational cannabis is legal in Canada, Uruguay, and 15 states in the U.S., as well as several other jurisdictions that have decriminalized or legalized personal possession and cultivation of small amounts of cannabis.

The U.S. is the largest and most dynamic cannabis market in the world, accounting for over 40% of global sales in 2020. The U.S. cannabis industry is expected to grow at a compound annual growth rate (CAGR) of 18% from 2021 to 2028, reaching \$41.5 billion by 2028, according to a report by BDSA. The main factors driving this growth are the increasing legalization of recreational cannabis at the state level, the expansion of medical cannabis programs, the emergence of new product categories such as edibles and vapes, and the consolidation and innovation of leading players.

Canada is the second-largest cannabis market in the world, and the first G7 country to legalize recreational cannabis at the federal level in 2018. The Canadian cannabis industry is expected to grow at a CAGR of 26% from 2020 to 2025, reaching \$8.2 billion by 2025, according to a report by Prohibition Partners. The main factors driving this growth are the increasing consumer demand for legal cannabis products, the development of new distribution channels such as online platforms and retail stores, the diversification of product offerings such as beverages and topicals, and the entry of new players from other industries such as alcohol and tobacco.

Europe is the third-largest cannabis market in the world, and the largest medical cannabis market outside North America. The European cannabis industry is expected to grow at a CAGR of 52% from 2019 to 2024, reaching \$3.2 billion by 2024, according to a report by Brightfield Group. The main factors driving this growth are the increasing legalization and harmonization of medical cannabis regulations across European countries, the growing awareness and acceptance of medical cannabis among patients and physicians, the expansion of distribution networks such as pharmacies and clinics, and the involvement of multinational pharmaceutical companies such as Bayer and Sanofi.

Africa is an emerging cannabis market with significant potential for growth. The African cannabis industry is expected to grow at a CAGR of 59% from 2018 to 2023, reaching \$7.1 billion by 2023, according to a report by The African Cannabis Report. The main factors driving this growth are the increasing legalization and decriminalization of medical and recreational cannabis in countries such as South Africa, Lesotho, Zimbabwe, Malawi, Ghana, Morocco, and Nigeria; the abundant natural resources and favourable climate for cannabis cultivation; the low production costs and high profit margins; and the rising demand for medical cannabis from local and international markets.

Investing in cannabis can offer attractive returns for investors who are willing to take on some risks and challenges. Some of the risks and challenges include:

- Legal uncertainty: Cannabis remains illegal at the federal level in many countries, including the U.S., which creates regulatory hurdles and operational difficulties for cannabis businesses. Cannabis laws can also vary widely across different states or regions within a country, creating a fragmented and complex market environment.
- Market volatility: Cannabis prices can fluctuate significantly due to supply and demand imbalances, competition, taxation, regulation,
